

# PG-28 Self-fix Metal Strut System

PUB 023

V.4 04/2018

With a PG-28, you can use all your moulding remnants to make ready-made frames.

Patented steel strut self-fixes flat to MDF using the special PG-28 strut fixing machine.

The bendable steel strut is bent up by the end user to the preferred stand angle and adapts well to moulding widths.

The metal struts come in two sizes. Plastic tips available in black, red or grey. The two parts clip together through the hole.

The PG-28 strut fixing machine is an elegant yet simple design which sits on the bench and can easily be stored on a shelf.

Select steel strut of suitable length

Place backing board in PG-28. Adjust back gauge to give suitable position for pressure pad

Position strut, spikes up, on spring pegs

Place board in to back gauge. Pull lever all the way down firmly

Strut in use

If frame to be packed, task is finished. If frame to be used, bend up the strut, right round. Place back on surface to check angle. If you wish, fit plastic end cap.

7515 PG-28

7517 Long Strut 147mm

7516 Short Strut 112mm

Tips Black 7518

Tips Red 7519
