

These instructions assume that the canvas print has been produced with a mirrored border for wrapping around a chosen stretcher frame.

First, select the correct gauge for the Lion stretcher bars you will be using.

7341 **Standard** - height 20mm

7342 **Premium** - height 25mm

7343 **Gallery** - height 45mm

7344 **XP Contract** -height 39mm

- 1 Align the gauge to one corner of the image on canvas. The outer edge of the image is assumed to align with the bottom edges of the stretcher bar frame when wrapped. Hold firmly.
- 2 Place blade in notches 1 then 2 and cut to edge of canvas, as picture. Make guide cuts along cutting edges B and C. To finish, cut along full length of Cutting edge A. Repeat at other three corners.
- 3 & 4 Using straight edge, carefully align with guide cuts B and C and trim. Repeat at other three sides.
- 5 Now, turn the canvas face down and draw light pencil lines to position the stretcher frame. Using a straight edge carefully align it between cut notch marks and draw light lines at each corner.
