

Certificate

OSHA | REACH

To Whom It May Concern:

We have investigated the applicability of the federal OSHA Hazard Communication Standard with respect to our laminated board (matboards, backing boards) & corrugated boards (CorriCor) products.

The OSHA Hazardous Communication Standard is intended to ensure that the hazards of all chemicals produced or imported are evaluated and information relating to the hazards is transmitted to affected employees in the manufacturing sector.

Employees must be advised of certain hazardous components in excess of 1% and carcinogens in excess of 0.1%. The standard also states that "articles" which do not release or otherwise result in exposure to a hazardous chemical under normal conditions of use are exempt.

Our products are, under normal conditions and situations, considered "articles" that do not release hazardous chemicals and are therefore exempt from the Standard. There are no provisions in the present OSHA Standard which apply to our products requiring the preparation of a Material Safety Data Sheet.

If you wish to keep a record that our product is not hazardous, we suggest you place this letter in your OSHA file. We trust this response is satisfactory. If we can be of further help, please contact us.

Best regards,
