

M SERIES ALUMINIUM FRAME MOULDINGS

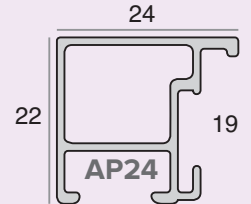

The LION M-Series range features sixteen precision profiles. Each comes in its own range of finishes. Those include smooth matt and bright anodised, all with brushed sides.

Other profiles have satin and textured painted finishes. The Oxide Brown Textured and the Forge Iron Textured are very on-trend just now.

All M-Series profiles offer superb quality and excellent value. All use double-plate corner hardware except AP-01. The strength and style of aluminium allows for contemporary and unobtrusive framing. Aluminium mouldings are usually supplied custom mitre cut to your size. Order corner hardware separately. Source the glass, mount and backing board locally. Assemble with just a screwdriver.

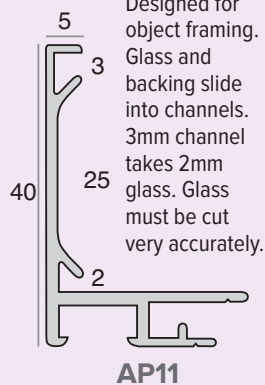

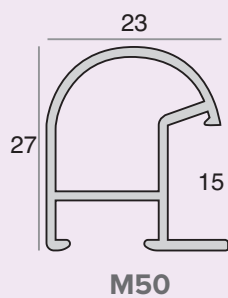

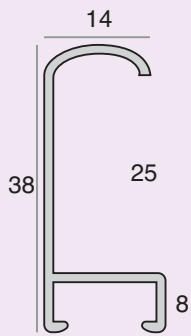

L-style mouldings for stretched canvas. AP16 takes Lion 24mm Premium bars and AP17 takes Lion 38mm XP Contract. Fix canvas with screws through holes in the base.

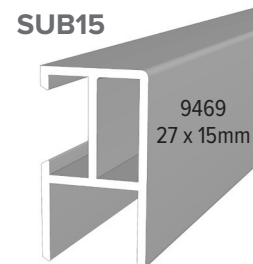

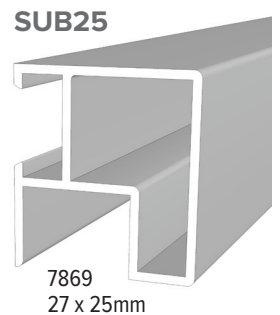

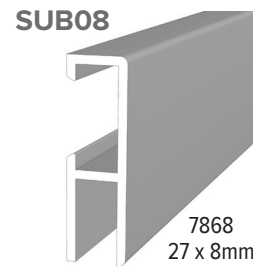

A unique back-loading profile. Frame is joined with normal corner hardware, but the glass+image+back sandwich is held in with special clips. Use hardware kit 9470. Great for price lists, menus and similar.

All drawings are approximately actual size.

Designed for object framing. Glass and backing slide into channels. 3mm channel takes 2mm glass. Glass must be cut very accurately.

Carefully designed aluminium profiles which are assembled into sub-frames and bonded to the back of a flat graphic panel. Ideal for ChromaLuxe and similar. Can also be used to frame panels and art.

Tray Profile for aluminium panels up to 2mm
