Art Hanging

V Hook for Pictures

NEW

The special feature of new V Hooks for Pictures is that most of it is below the pin.

This means that when used with a sawtooth hanger, the hook should not show above the top of the frame.

They work with MSH Sawtooth Hangers and most other types of sawtooth hangers. Also with all with CWH Hangers.

They also work well with more traditional cord and wire which sit on the pin.

- Good for hanging most pictures with cord or wire up to about 2kg.
- Steel, silver zinc plated finish.

V Hook for Pictures is 24mm tall, 8mm wide. It projects by 7mm

From
11p each

V Hooks
work brilliantly
with MSH
Micro-sawtooth
Hangers

MSH Micro-sawtooth Hangers 49mm Press-fix

Many sawtooth hangers have teeth spacing so coarse that it is not easy to level the frame.

The MSH Hanger has been designed by LION to allow very fine adjustment for easy levelling of a frame hanging on a hook or a pin.

- Easily press-fixed into wood and PS mouldings with the magnetic tool and a hammer.
- Spikes are aligned along the grain for easier fixing.
- Volume framers can use the custom-built MSH Press, foot operation makes it very productive.
- For mouldings 12mm and wider.

10190 MSH Micro Sawtooth Hanger Press-fix
Pack 200 **£7.35**

MSH Micro-sawtooth Hangers Hand Fixing Tool

Magnetic locator head with steel handle to speed positioning and fixing of MSH Hangers with a hammer.

Designed specifically for occasional fixing of MSH Hangers. Locator head has M8 thread fixing hole.

Magnetic
locator head

10193 Hand Fixing Tool for MSH Hanger **£29.87**

MSH Hanger Fixing Press Foot-operated

Designed for rapid positioning and fixing of MSH hangers on wood picture frames and stretcher frames.

The fixing press and frame positioning system are built onto a table-top, 700 x 700mm. The press operator, seated, positions the frame, loads an MSH hanger onto the magnetic head and fixes it by pressing the foot pedal.

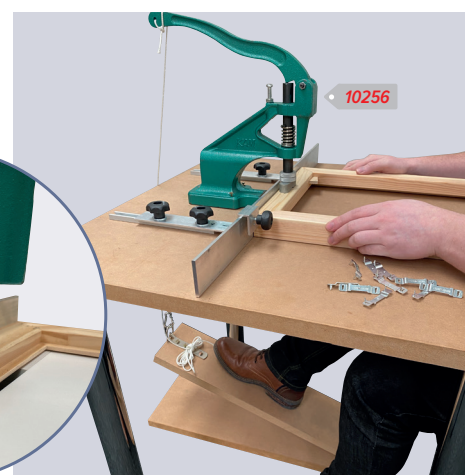

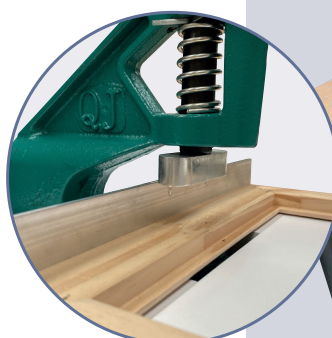

Chassis of press is cast iron and it is fitted with locator head for MSH Hangers. The head has fine adjustment for frames from 10mm high up to 30mm. Frame positioning system takes frames up to 700 x 500mm.

Can sit in the corner of the workshop, always ready for use. Built to order, so allow 5 - 6 weeks

Custom designed
and built by LION

Pin caps for tidy finish

High Quality Hardened Pins for Picture Hooks

Made in Italy

The updated LION range of hardened picture pins includes two with traditional knurled brass heads.

Then two pins with decorative shim heads, one extra thick plain pin with support washer and five plain pins which are all made in Italy by renowned manufacturer, Titibi. They have perfected a special hardening process to make the pins very stiff, but if overloaded should bend not break, which could be dangerous.

The range now includes pin lengths from 17mm to 26mm. The diagram shows how the pin length relates to the thickness of the wall surface. If the wall is plasterboard / drywall then the length does not generally matter too much. If it is a plaster coating over a brick or block wall, the thickness can be around 10mm, but some trial and error might be needed.

Square Wire Photo Frame Stands

Square Wire Photo Frame Stands fit into a socket on the frame backing board.

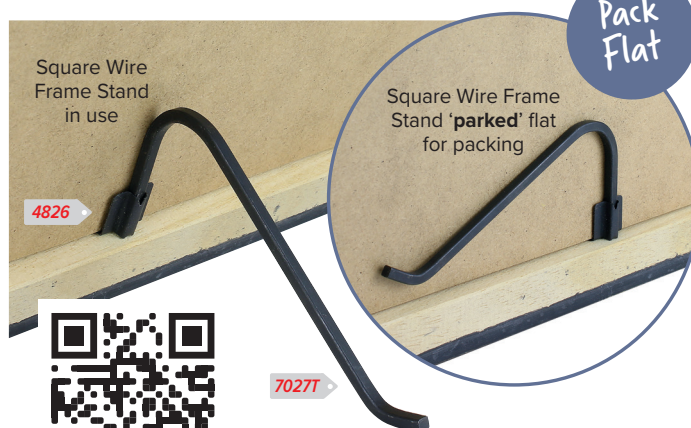

During frame assembly the stand is inserted flush with the back, for easy packing. The user simply lifts the stand out, turns it through 90° and re-inserts it.

Stands come in three sizes, Small, Large & Gallery, each in a choice of black, brass or silver finishes. Clip-on sockets fit over the edge of backing board. Press-fix are pressed onto the backing board. Choose black or silver finishes.

This popular range has recently been improved and upgraded. The Trial Pack helps you to select the size which best suits the frame size and moulding width.

9951 Square Wire Photo Frame Stands Trial Pack

£3.00

Hangers for Easy Levelling of Frames and Panels

Make it easy for your customers to hang their pictures level with **Angled CWH5 Sawtooth Hanger** and **Angled Panel Hanging Plates**. Just nudge from side to side to compensate for any slight misalignment in the picture hooks or pins.

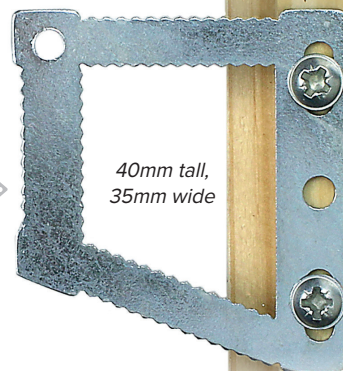

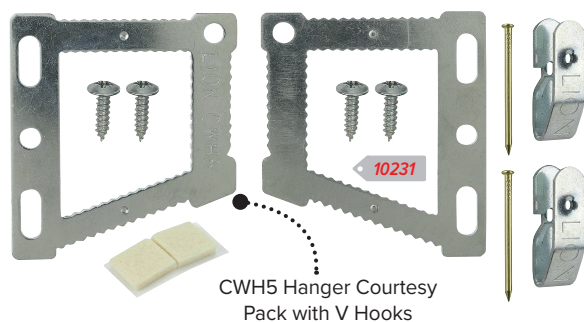

For Wood Frames & Canvases:

Angled CWH5 Micro-sawtooth Square Hangers for pictures

The unique feature is that the **Angled** lower edge allows the frame to be easily levelled.

Screw CWH5 hangers one onto each side of the frame. Then hang the frame on almost any kind of hooks, screws or nails. Then to get it perfectly level, a slight lift and nudge of the frame side-to-side is all that is needed. The micro sawtooth allows very fine adjustments of level.

Pressed-in dimples help when measuring the spacing between the hangers for placing the hooks on the wall.

9201A/B

40mm tall,
35mm wide

From
£0.32
pair

9201A	CWH5 Angled Micro-sawtooth Hangers Pack 50 for 25 frames	£9.18
9201B	CWH5 Angled Micro-sawtooth Hangers Pack 200 for 100 frames	£31.58
10231	CWH5 Courtesy Pack: CWH5 x 2 + V Hook x 2 inc screws & pins, 100 bags	£74.16

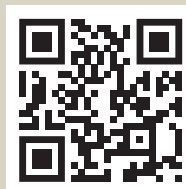

Cleaning of Panel Backs Prior to Bonding

When planning to use self-adhesive Panel Hanging Plates, then the back of the panel must be perfectly clean and grease free.

Options are 70% Isopropyl Wipes or 100% Isopropyl Aerosol spray, both very effective and easy to use. They dry instantly. They are also good for general cleaning and de-greasing.

Wipes come in individual sachets, with 70% alcohol, which help minimise waste, or in dispenser tubs which can be better for a busy workshop.

Another option is 100% isopropyl alcohol in an aerosol making it very handy to use for all kinds of cleaning around the workshop. Best to use with a lint-free microfibre cloth.

9837

For ChromaLuxe, Dibond and other printed panels:

Angled Panel Hanging Plates

Panel Hanging Plates for Printed Panels now with **Angled micro-sawtooth hangers** for easy levelling

Applied in handed pairs, these make it very easy to hang and level a printed panel – just a little lift and a sideways nudge.

Hanging plates have easy-peel backing paper. Take care to always thoroughly clean the panel back surface with a solvent wipe. Plates made to our design in EU.

Angled Hanging Plates sit on almost any firm hooks, nails or screws in the wall, including new V Hooks for Pictures. Estimated safe working load is 2.5kg when used in pairs. Not suitable for soft panel surfaces such as paper, mountboard or similar.

Angled Panel Hanging Plates are available in BB, 100 x 100mm, EE, 80 x 60mm and FF, 80 x 80mm sizes

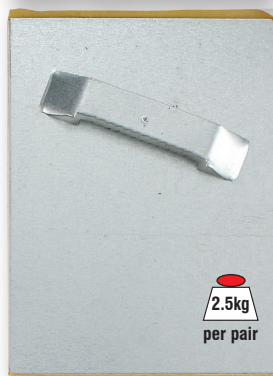

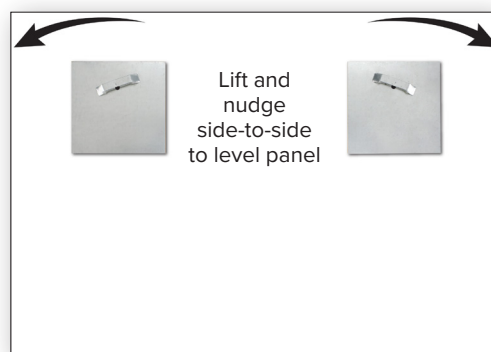

LION Angled Panel Hanging Plates are subject to the European Community Design Application No. EM007463690

LINECO HAYAKU Gummed Mulberry Tape

25mm x 30.48m roll 52gsm²

This is museum quality Japanese mulberry paper coated with acid-free water-activated adhesive and has long been popular for quality framing.

Of the very highest museum quality, it is used for hinging works of art on paper and for the repair of important paper art. The adhesive dries strong and won't creep yet is reversible with water.

Hayaku tape is strong and light at only 52gsm².

3894

3894 Hayaku Tape 25mm x 30.48m roll £24.56

FILMOPLAST P90 NESCHEN Self adhesive paper tape

40mm x 50m roll 50gsm²

NEW 40mm width

One popular application is for the many framers who use the high-grade P90 pressure sensitive paper tape to wrap and seal the glass/mount/art/backing sandwich against dust and mites.

Another application is for hinging digital prints. Gummed tapes can be risky to use with giclee inkjet prints because of their water sensitivity. High quality P90 self-adhesive tape is a safer alternative. On 40mm, wide rolls, with silicone release liner.

10251

10251 FILMOPLAST P90 Tape 40mm x 50m roll £17.41

Complete Guide to Direct Contact Overlays, DCO

by James Miller
MCPF GCF

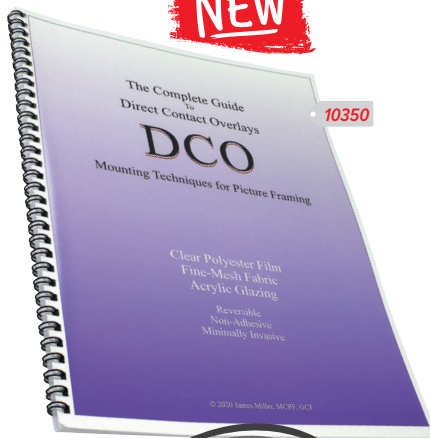

The new book by this internationally renowned framing educator will help you gain new expertise in picture framing designs and mounting options with three categories of Direct Contact Overlay attachments.

Over 165 full-colour photos and detailed illustrations give clear and concise instructions for creating innovative, preservation-quality, mounts using clear polyester film, fine-mesh fabrics and acrylic glazing.

DCO mounts are float mounting techniques using these transparent or nearly transparent materials to cover, support and securely attach items within a frame, providing secure support and showing all edges. Recto-verso (front-back) mounts are described for some items, as well. The non-adhesive techniques are minimally invasive, reversible, low-risk, uncomplicated and cost effective. They are also framer-friendly, requiring only readily available materials and framing tools.

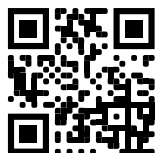

Useful for framing items that are difficult to attach in a frame without damage. This includes as deteriorated, fragile, antique papers or textiles, which may be unable to support their own weight or withstand the stresses imposed by traditional mounting methods. DCO mounting can also be useful for 3D items, such as books, magazines, newspapers, golf and tennis balls. 80pp.

3M ATG Tapes on 55m rolls

Our long-standing range of 3M #924 All Purpose ATG tapes on 55m rolls continues as normal, alongside the same #924 quality on 33m rolls.

We have recently been able to upgrade our LION ATG tape on 12mm x 55m rolls to the 3M #987 General Purpose grade and add a 19mm width. All are made in USA.

9636	3M #987 ATG Tape General Purpose 12mm x 55m	£5.93
10283	3M #987 ATG Tape General Purpose 19mm x 55m	£13.06
3675	3M #924 ATG Tape All Purpose 12mm x 55m	£12.39
3676	3M #924 ATG Tape All Purpose 19mm x 55m	£15.45

T Screws for Safe & Secure Frame Hanging

NEW Z Bar + T Screw Hanger Kit for Wood Frames

Each kit contains two pairs of 150mm Z Bars and two T Screws and Slotted Plates.

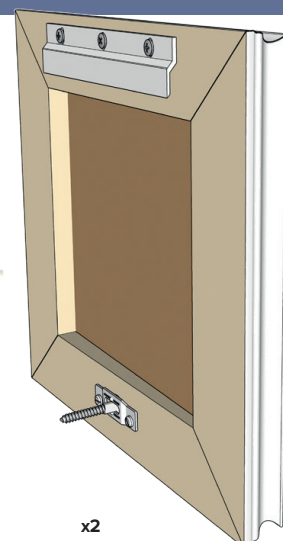

To hang either two smaller frames or one larger, over 400mm wide Z Bar Hangers work in pairs. One bar is screwed to the back of the frame, pointing down. The other, on site, is fixed to the wall, pointing up. The Z Bars have slotted screw holes for easier levelling. The frame just hooks on.

To make it secure, fit a Slotted Plate at the centre bottom of the frame and use the new T Screw Companion tool to mark the T Screw position, drill and insert. Lock using the T Screw spanner.

10307 Z Bar + T Screw Hanger Kit for Wood frames **£5.58**

Z Bar Slim + T Screw Hanger Kits will be available for Aluminium frames late-2021

NEW T Screw Companion Tool

Unique new tool which makes it easier to mark the positions for T Screws when installing wood frames.

It clips into a Slotted Plate on the frame. When pressed against the wall, the hardened point leaves a small dimple mark for the T screw position in the wall surface. Pull out the tool, lift the frame off and drill the hole.

The tool is 82 x 22mm, made of spring steel. Designed by AccuMount in USA and subject to a Patent Pending.

10306 T Screw Companion Tool for Wood frames **£13.95**

NEW Universal Socket Driver

The Universal Socket pushes onto any nut or shape to turn it and it speeds installation of T Screws.

Start the T Screw into the hole then push the socket on. The socket fits onto most hex drives in an electric screwdriver.

10305 Universal Socket Driver **£5.95**

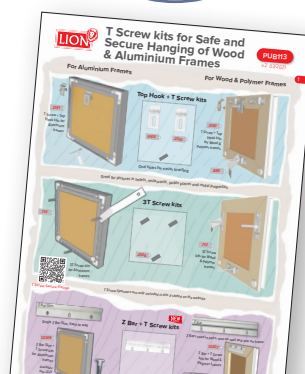

NEW T Screws Trial Pack

To help framers try T Screws, this pack contains:

- 3150 Top Hook + T Screw kit for wood frames
- 10307 Z Bar + T Screw kit for wood frames
- 3191 Top Hook + T Screw kit for aluminum frames
- 713 3T Screw kit for wood frames
- 889 T Screw Spanner, standard

10348 T Screws Trial Pack **£12.43**

NEW T Screw Spanner Long

The standard T Screw spanner 138mm, is fine for most installation and removal work.

Some applications, such as when using T Screws to install printed panels fitted with aluminium sub-frames, need this longer spanner, 205mm. It also works fine with normal frames. It has a soft handle for comfortable working and a hole to hang it.

10290 T Screw Spanner Long 205mm **£15.00**

Stretcher Bar Wedge Retainers

NEW

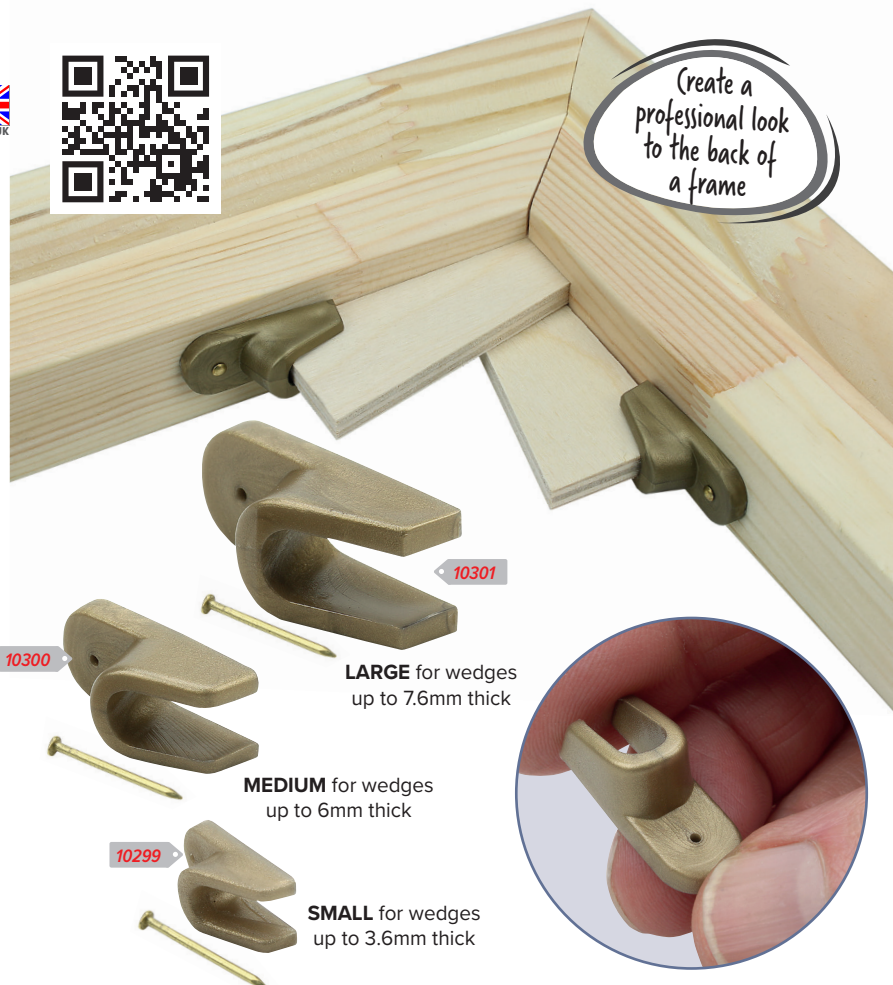

Create a professional look to the back of a frame

The finest framed canvases have the wooden wedges secured to prevent them dropping out in transit or as the wood dries.

If any wedges do drop out, they can fall between the canvas and the stretcher, often causing a bump to appear on the canvas. FATG Framing Quality standards advise using some method to hold the wooden wedges in place to avoid this.

These very neat wedge retainers are quickly fixed with a brass pin, 17mm, included, and give a very professional look to the back of the frame. They allow the wedges to be tapped in later as required. In three sizes, all in dull gold high-density polyethylene with satin finish.

Moulded in UK and available in three sizes, plus the Trial Pack.

10299 Wedge Retainers **SMALL** pack 40 + pins **£18.00**

10300 Wedge Retainers **MEDIUM** pack 40 + pins **£20.00**

10301 Wedge Retainers **LARGE** pack 40 + pins **£22.00**

10302 Wedge Retainers **Trial Pack**
4 of each of the three sizes + pins **£6.50**

Compressor Condensate Oil/Water Separator CT3 by Drymec

NEW

Compressor users often dispose of the oil/water mixture that is drained out regularly down a drain.

The traces of oil in the water both foul the drain system and can break the law. About the size of a small suitcase, the Drymec CT3 sits next to the compressor and can be connected by a tube between the drain tap and the Drymec inlet. Inside there are special filter bags and the unit is filled with water. When the condensate is treated less than 10ppm of oil residues remain and it can safely be poured down any drain. Works by gravity, no power supply needed.

10353 CT3 Compressor Condensate Oil/Water Separator **£225.00**

Rotary Compressor Direct Drive 10PM2 7.5KW by SCR

NEW

As a framing workshop gets busier the need often arises for a bigger compressor.

A rotary compressor is often the best choice and the SCR 10PM2 makes it more affordable. The air output is 10 cfm - 38 cfm @ 8 bar free air delivered, with a max duty cycle of 100%. Check that against any other compressor.

The 10 hp motor is 7.5 kw with permanent magnet and the remarkable variable speed ensures greater efficiency over a wide operating band. That with the direct drive and the enclosure design gives a low noise level ~68 dBA. The internal timer prevents unnecessary running over periods of no demand.

10351 SCR 10PM2 7.5KW Rotary Compressor **£3620.00**

Compressed Air Dryer SDE100 by Drytec

NEW

Moisture in the air (compressed air supply) is bad news in any framing workshop.

Now this Drytec refrigerated SDE100 unit offers a dry and filtered air supply at a reasonable cost. It has two filters integrated into the dryer frame which offer a huge advantage to users and service technicians.

The drying capacity is 100 m3/h. The filters are GKO150X and GKO150Y with MKO150 element. Pressure drop is 100 mbar.

10352 Drytec SDE100 Refrigerated Air Dryer **£1090.00**

Mountboards & Boards

Canvas, Print & Panel

Art Hanging

Lower temperature heat activated adhesive foamboards for mounting of art on paper and on canvas

- MountCor for Paper bonds at around 65°C and MountCor for Canvas and heavy textured papers has a thicker coating of adhesive and bonds at around 70°C. These temperatures are much lower than most other heat activation temperatures
- The specially formulated MountCor adhesive is acid-free, inert and designed for long term preservation of the art. The bond is permanent, with no risk of lifting over time
- Each board has its own translucent release paper with grid to help accurate alignment of the art
- Gilman Brothers manufacture and coat the foamboards in the same plant. The rigid 5mm foam core board has a super smooth surface; it is coated with a heat-activated adhesive using a special air-release technology to eliminate any orange peel effect, often found with pulp core boards
- Works with most heated flat bed and vacuum presses as well as heated roller presses

MountCor comes in two variations:

- **MountCor for Paper**, to bond at around 65°C
- **MountCor for Canvas** and heavy textured papers has a thicker coating of adhesive and bonds at around 70°C.

Both MountCor variations are on white 5mm thick high-density foamboard. Sheets are 1016 x 813mm. Buy as single sheets on LION Mixed Mountboard Despatch so it is very easy to order a single sheet to try in your press. Or buy in packs of 5.

10276	MountCor Paper & Canvas Trial Pack: 3 MCP & 2 MCC sheets	£81.60
-------	--	--------

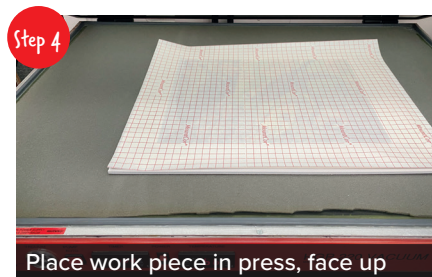

Cut MountCor board to size

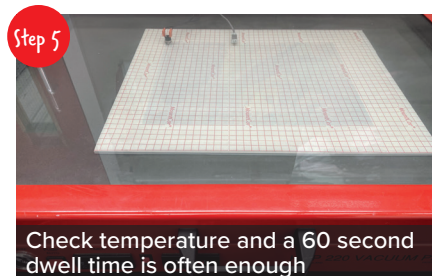

Peel back release paper, leaving about 50mm still adhered

Position art, then bring down release paper and use the grid to align the art

Place work piece in press, face up

Check temperature and a 60 second dwell time is often enough

Remove from press and lay on flat surface to cool
